

SM ComPak® Shippers

- Surface Mount Component Shipper
- Protects Many Sizes and Styles
- Eliminates Lead Damage
- Static Shielding Mailer with Dissipative Inserts
- 1,2,4 and 10 Paks Available

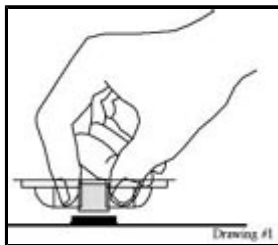

Protect against lead damage

SM ComPak® eliminates lead damage when shipping or handling components with fragile leads. Leads are suspended while shipping. A squeeze feature allows the part to be removed from packaging without being touched by operator's hands.

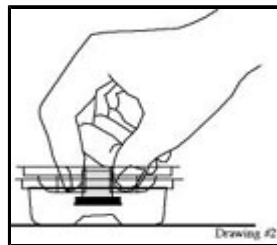

Protect against Static

Electronic components that are sensitive to static are protected by CCI's static shielding Corstat™ shipper. The thermoformed insert, foam and adhesive are static dissipative to prevent any charge from being generated.

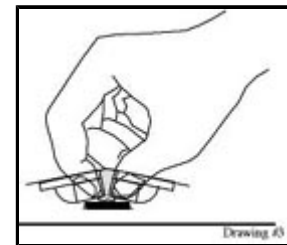

1) Dissipative adhesive allows part to be picked up without touching operator's hands.

2) Handle & ship component safely in dissipative insert.

3) Squeeze dissipative plastic insert to release component.
